SUMMARY

DevOps Engineer with production internship experience building Kubernetes clusters from scratch, designing GitOps pipelines, and automating cloud infrastructure on AWS and Azure. Strong focus on platform engineering, scalability, and developer productivity.

EDUCATION

Jain College of Engineering and Technology, Hubli

2022 – 2025

Bachelor of Engineering, Computer Science

CGPA: 8.01

EXPERIENCE

DevOps Engineer Intern

Jan 2026 – April 2026

Synthlane Technologies Pvt. Ltd.

Noida

- Bootstrapped a production-grade Kubernetes (K3s) cluster from scratch on Hetzner Cloud using kubectl and Terraform, provisioning highly available worker nodes with private networking and bastion-based secure access.
- Designed modular Infrastructure-as-Code architecture using Terraform modules for compute, networking, firewall management, and scalable multi-node cluster provisioning.
- Implemented platform security and traffic management using Traefik Ingress Controller, Cert-Manager with Let's Encrypt TLS automation, and Infisical for centralized secret management.
- Engineered CI/CD and GitOps deployment workflows for 20+ microservices using GitHub Actions, Harbor container registry, Terraform, and Helm-based Kubernetes releases.
- Developed centralized observability stack using Prometheus, Grafana, and Dozzle for infrastructure monitoring, container visibility, and operational debugging.

PROJECTS

Serverless Log Processing Pipeline — AWS

[github](#)

AWS API Gateway, SQS, Lambda, S3, Athena, Terraform, Python

- Architected event-driven pipeline handling 5,000 logs/sec baseline, scaling to 50,000+/sec using SQS buffering.
- Built 3-stage Lambda workflow (Ingest → Process → Report) with batch triggers and structured log storage in S3.
- Generated automated analytics reports using Athena.
- Provisioned infrastructure via Terraform with least-privilege IAM, achieving production-grade setup at minimal cost.

Multi-Environment Kubernetes Deployment Platform [Internship Project]

Terraform, Helm, Kubernetes (K3s), GitHub Actions, Harbor, Infisical

- Engineered Infrastructure-as-Code deployment platform for managing 20+ microservices across development, staging, and production Kubernetes environments, successfully deploying and operating 3 live production applications.
- Built Terraform + Helm based deployment orchestration system using reusable custom Helm charts for automated Kubernetes application provisioning and release management.
- Designed GitHub Actions CI/CD workflows supporting environment-aware deployments, application restarts, image version rollouts, and workspace-based infrastructure management.
- Integrated Harbor private container registry for secure image storage and automated image promotion workflows across multiple Kubernetes environments.
- Configured Traefik Ingress and cert-manager with Let's Encrypt for automated TLS provisioning and domain-based routing for production workloads.
- Implemented centralized secret management using Infisical and Kubernetes Secrets for secure injection of environment variables and infrastructure credentials.
- Managed Terraform remote state using Hetzner S3-compatible object storage with isolated workspace-based state management for multi-environment deployments.

SKILLS

Cloud & Infrastructure

Microsoft Azure, AWS, Hetzner Cloud

Containers & Orchestration

Docker, Kubernetes (k3s, AKS), Helm

Infrastructure as Code

Terraform, Bicep

CI/CD & GitOps

Jenkins, Argo CD, GitHub Actions, Woodpecker

Monitoring & Observability

Prometheus, Grafana, Dozzle

Configuration Management

Ansible

Programming & Scripting

Python (FastAPI), Shell Scripting

Version Control & OS

Git, Linux
